

"Empowering Men and Women through Health, Equality & Technology"

Title of the project:

WeCare: Empowering Men and Women Through Health, Equality & Technology

Team members:

- 1-BENIE GRACE RACHEL
 - 2- AYISSI NGA BORIS DESIRE
 - 3- BABA IBRAHIM MOHAMED
 - 4. ALICK CHALI
 - AYESHA EHSAN
 - Roles: Project Lead, Research Lead, Tech Developer, Outreach Coordinator, Monitoring & Evaluation (M&E) officer
-

SDG area:

- **Goal 3:** Good Health and Well-being
 - **Goal 5:** Gender Equality
 - **Goal 9:** Industry, Innovation, and Infrastructure
-

Geographical area:

- **Cameroon/Zambia (Urban & Semi-urban communities)**
-

What is the problem/need?

Globally, only 1% of healthcare R&D focuses on female-specific conditions beyond oncology. In many African countries like Cameroon and Zambia, over 70% of women in rural and peri-urban areas lack access to reliable health information and services. This leads to high maternal mortality, undiagnosed reproductive health conditions, and preventable deaths. These issues are further intensified by cultural taboos, gender-based violence, school absenteeism during menstruation, and low digital literacy.

On the other hand, men also face significant challenges accessing mental health support, including stigma, societal expectations, limited resources, and lack of awareness. These barriers contribute to a

silent mental health crisis, particularly impacting men who are often expected to be stoic and strong, which can discourage them from seeking help.

What solution do you offer?

Our solution is a hybrid solution of community engagement and digital tools. It includes awareness workshops, peer educator training, hygiene kit distribution, and SHE CARES Clubs.

Digitally we propose a **multi-feature mobile app and community hub** called **Bridge for Balance**, which will:

- Offer **telehealth services** tailored to both men's and women's health issues.
- Provide **digital education modules** for women and girls in tech and men on emotional wellness.
- Use **AI-assisted feedback** for personalized learning and support.
- Connect users to **local resources and NGOs** for physical and mental health services.

Data

What data is measured & collected?

- User demographics (gender, age, location)
- App usage (frequency, services used)
- Health and education outcomes (e.g., increased clinic visits, tech course completion)
- Feedback from workshops and peer groups

How the analysed collected data will be used?

- Through **dashboards** tracking engagement, improvement in digital literacy, and self-reported health outcomes
- Use **AI and statistical tools** for trend analysis and impact reporting

Product roadmap

High-level architecture:

See prototype sketch below;

- **User interface (UI)** for education, telehealth, and community forums
- **Backend database** for secure data handling
- **Machine learning layer** for adaptive learning and resource suggestions
- **SMS and offline support** for low-internet regions

Preliminary design (description):

- A simple, multilingual mobile app with a clean interface
- Includes voice-to-text and visual guidance
- Physical **community hubs** with trained facilitators in partner schools and clinics

Market

**Co-funded by
the European Union**

Funded by the European Union Erasmus+, ERASMUS-EDU-2022-VIRT-EXCH-NDICI, [Project ID 101112172](#). Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

Who is the customer?

- Men and women aged 15–45 in underserved communities
- NGOs and health organizations seeking tech-based outreach
- Local governments and school networks

What USP (unique selling point) do you offer?

- **Gender-balanced** and culturally sensitive approach
- Offline functionality and **AI-based learning customization**
- Integrated **health + education + empowerment platform**

Who is your competition?

- Generic e-health platforms
- Government apps (often fragmented or urban-focused)

Market entry strategy:

- Pilot in schools, churches, and clinics
- Partner with local councils and NGOs
- Run community tech-and-health workshops to build trust and adoption
- Engage local influencers and educators

Resource Planning

What are your goals?

- Launch pilot in 2 communities within 6 months
- Reach 1,000 users and train 100 local facilitators in the first year
- Build a sustainable partnership model with health centers and schools
- Support 100 girls with menstrual kits
- Reduce stigma in both women and men health issues

Next steps & timeline:

- **Month 1–2:** Research and community mapping
- **Month 3–4:** App development and design of training modules
- **Month 5:** Pilot testing and local facilitator training
- **Month 6:** Launch, feedback loop, and iteration

Team roles & cost estimation:

Team Member	Role	Tasks
Project Lead	Coordination & Oversight	Timeline, partnerships
Research Lead	Data & Impact	Community studies, feedback analysis
Tech Developer	App Development	Backend, UI/UX
Outreach Coordinator	Field Engagement	Workshop delivery, communication

Estimated Budget:

- App Development: \$3,000
 - Training & workshops: \$4,000
 - Marketing and outreach: \$3,000
 - Hygiene kits: \$1,000
 - M&E and Admin: \$2,000
 - Contingency/Miscellaneous: \$2,000
 - Total: **\$15,000**
-
